

Based on direct measurement of spatial resolution for screen-film radiography and CT image, which of the following statement is true?

- Screen-film radiography ( 7 lp/mm) > CT (1 lp/mm)
- Screen-film radiography ( 1 lp/mm) < CT (7 lp/mm)
- Screen-film radiography ( 7 lp/mm) = CT (7 lp/mm)
- Screen-film radiography ( 1 lp/mm) = CT (1 lp/mm)

Which of the following is not a standard view in pelvic angiography?

- AP
- Lateral
- RPO
- Craniocaudal

For the average patient, the central ray for a lateral projection of a barium-filled stomach should enter:

- midway between the midcoronal line and the anterior abdominal surface.
- midway between the vertebral column and the lateral border of the abdomen.
- at the midcoronal line at the level of the iliac crest.
- perpendicular to the level of L
